ENGINE ADDITIVES

WE DRIVE FIRST CLASS

Is Your Engine Deteriorating?

Loud engine noises? Losing the power to accelerate?
Increased fuel consumption? Vibrations during idling?

If the above are some of the symptoms you observe for your vehicle, maybe it is time to consider adding engine additives which will get your engine back to tip-top condition. Over time, impurities do build up and wear and tear occurs in the engine interior, which prevent your vehicle from achieving its peak performance.

Our Engine Additives

To clean and protect your engine, our additives are comprehensively formulated, tested and proven. With optimised engine performance, you will not only enjoy a smoother, more comfortable drive, but also considerable savings on maintenance in the long run.

Fuel System Cleaner

With increasing environmental concerns, engines these days are being downsized. They operate under demanding conditions and coupled with varying standards of fuel available in the market, deposits can form easily on inlet valves and injectors, thus creating an adverse effect on the performance, fuel economy and the drivability of the vehicle. Fuel system cleaner will help remove carbon and gum deposits from fuel injections, ports intake valves, spark plugs and combustion chambers to:

- Restore lost power and acceleration
- Prevent engine knocking
- Keep fuel system clean and improve fuel economy

Engine Flush

The detergent and special solvent in this additive disintegrate and remove sludge and varnish from the engine interior. As a result, it restores your engine performance and will:

- Reduce engine noise
- Restore acceleration response
- Reduce vibration during idling

Engine Oil Treatment

The Engine Oil Treatment is a high-grade additive containing Molybdenum-Dithiocarbamate (MoDTC). It dissolves easily and boasts superior effectiveness against friction throughout the moving parts of the engine. This treatment effectively:

- Maximises acceleration performance
- Reduces fuel consumption
- Reduces engine noise
- Protects engine interior from extraordinary wear and tear
- Resists against oxidative deterioration
